## The Solution For Fire Professionals®

Thermo Technologies, LLC, is leading the way in development of new, innovative and cost effective products to combat the devastating loss of life and property caused annually by fire. Innovative products are accompanied by consistent adaptation to customer requirements and an active company philosophy. The commitment to the industry proves not only great products, but a service standard that is unmatched by other companies. We provide training programs for professional firefighters; and during fire incidents, we also provide on-site training. This assures that firefighters will have complete knowledge in the application of our products to maximize their effectiveness.

### Thermo-Gel.

Photo courtesy of DakotaFire Systems

- Effective in application from fixed wing and rotor aircraft
- Provides hours of protection for structure, equipment and property
- Ground application with FireDos® proportioners and end-of-the-line nozzle systems
- Clings to all types of vertical surfaces, including glass
- Excellent performance as a suppressant on all types of Class A fires
- Sunlight degradable and environmentally compatible

### Thermo-Foam.

- Class A Foam approved for all types of fixed wing and rotor aircraft
- Can be used with fresh or salt water
- Non-corrosive and biodegradable
- Reduces water consumption by 3-5 times
- Suitable for use in high and medium expansion foam nozzles and generators
- Application rates of .1-1% as a wetting agent or expansion foam

### FireDos®

- Water-driven proportioner
- No electricity or complicated electronics
- Custom-built for each type of engine application
- Proportions Class A or Class B foam or gel
- Wide-range of proportioning rate options
- Easy to install and operate
